

## BATHROOM TAPWARE - NEW ZEALAND STOCKED RANGE - FLOW RATES

The water pressure supplied to your house will determine how quickly water flows from a tap when it is turned on fully.

The below chart shows how many litres of water each tap in our range will deliver in a minute, at various common water pressure rates.

As an example, most homes in Auckland city receive mains water supply from WaterCare at approximately 2 bar/200 kpa pressure. If you were on pump-driven tank-water supply, or gravity-fed tank water supply however, your water pressure may be higher or lower. Your plumber can advise you on what water pressure your home receives.
